

Part 1: Course Goals and Questions (Task 1)

SMART Goals

Goal Focus	Specific	Measurable	Achievable	Relevant	Time-Bound
Technical Expertise	Prepare for and pass the AWS Certified Cloud Practitioner exam to strengthen cloud infrastructure skills.	Achieving a passing score on the official certification exam.	Yes, by dedicating structured study hours each week alongside coursework.	Enhances technical leadership and supports scalable business operations.	By the end of this seven-week course block.
Project Management	Implement Agile and Scrum methodologies to organize this portfolio and upcoming regional leadership initiatives.	Successfully mapping out weekly sprint deliverables for the portfolio and one community project.	Yes, utilizing existing knowledge of Jira and WBS frameworks.	Directly translates academic concepts into real-world efficiency and team delivery.	Reviewed and adapted weekly throughout the course.
Spiritual Integration	Document specific instances where ethical tech governance and faith-based integrity intersect in daily work.	Writing at least two detailed reflective journal entries per week.	Yes, requiring only 15–20 minutes of dedicated reflection time.	Fulfills the capstone's requirement to blend discipleship with professional capability.	Submitted by 11:59 PM each Sunday.

My Questions (Please see attached video file for my answers)

- **Question 1 (Provided):** How can the skills and knowledge I gain from IT 497 not only align with and enhance my long-term career aspirations but also contribute to my spiritual growth and leadership as a disciple outside the professional realm?

- **Question 2 (Student Created):** How can I leverage my technical background in telecommunications and cloud architecture to create digital environments that foster community empowerment, growth, and innovation?
- **Question 3 (Student Created):** In what ways can I apply Agile methodologies to my spiritual progression, continually iterating on my daily habits to become a more effective disciple-leader?

Part 2: Spiritual Progression Portfolio (Task 2)

Three Spiritual Principles

- **Integrity in Stewardship:** Managing complex technical networks and business operations requires a deep commitment to accountability. This principle ensures that I do the right thing, applying exactness and honour to both digital configurations and personal interactions, whether anyone is observing or not.
- **Continuous Revelation and Learning:** Technology—from Linux administration to cloud computing—is constantly evolving. Similarly, spiritual growth requires a willing mind and heart to receive ongoing guidance from the Holy Ghost. Embracing continuous learning makes me a more adaptable engineer and a more receptive disciple.
- **Empowering Others through Servant Leadership:** True leadership, whether guiding regional organizational initiatives or leading a technical team, mirrors the Savior's example. This principle focuses on lifting others, sharing knowledge, and building systems that serve the community.

Summary of Collected Materials

I have gathered specific scriptural passages from the Doctrine and Covenants regarding the Lord requiring the "heart and a willing mind," alongside sections of my patriarchal blessing that emphasize leadership, stewardship, and continuous growth. I have also compiled recent general conference talks focused on servant leadership and integrity, pairing them with personal journal entries that connect these spiritual teachings to my daily responsibilities in guiding teams and designing technological infrastructure.

Part 3: Professional Growth Portfolio (Task 3)

Reflective Journal Entry

Starting this digital portfolio has been both a humbling and invigorating exercise. Looking back at the intersection of my technical work, from hands-on site inspections at telecommunications facilities to establishing business operations, I feel a profound sense of responsibility. Initially, integrating spiritual principles with hard technical skills like network troubleshooting and cloud deployment felt like merging two entirely different worlds. However, organizing this portfolio

under the core values of empowerment, growth, and innovation has highlighted how deeply intertwined these aspects truly are. True technical leadership requires profound ethical grounding. I am eager to see how documenting this journey over the coming weeks will refine my ability to lead with both analytical precision and spiritual confidence.

Significant IT Projects Summary

Project Name	Your Role	Skills Applied	Challenges Overcome	Outcomes Achieved
Besprotech Solutions Ltd Hub Launch	Technical Head & Founder	Strategic IT Planning, Agile Management, Infrastructure Design	Aligning digital transformation goals with initial infrastructure and operational constraints.	Established a cohesive technology facilitation hub driven by empowerment, growth, and innovation.
Telecommunications Facility Optimization (YEN036)	Mobile Telecommunications Engineer	Network Configuration, Hardware Diagnostics, Systems Analytics	Identifying and documenting critical network parameters during a tight, on-site inspection window.	Delivered actionable site insights to optimize regional hardware and network performance.
AWS Cloud Architecture Study & Deployment	Lead Architect / Learner	AWS Cloud Practitioner Competencies, Security Protocols, Linux Admin	Translating traditional physical network concepts into scalable, cloud-native equivalents.	Designed secure, scalable architectures mirroring real-world application deployments for upcoming certification.
