

Name : Promise Beshel

Course : IT 497 - Capstone Project

Date : August 14, 2026

Assignment : Week 7 Task 2 - Envisioning Your Future

### What's Next? Reflections on Disciple-Leadership, Learning, and Covenant Stewardship.

As I conclude this Capstone course, I reflect upon my transformation from an IT student into an ethical digital steward. What began as a procedural journey of configuring servers, scripting solutions, and building professioned portfolios has matured into a lifelong commitment to disciple-leadership. In our increasingly interconnected world, technical expertise is not merely a tool for career advancement, but a sacred trust. True technical excellence requires uniting precision with moral integrity, ensuring that the systems we build and maintain actively protect and uplift the people who rely on them.

Throughout this program, hands-on projects and critical case studies have served as the foundation for my professional and ethical growth. Developing Heritage Vault 2.1 reinforced the importance of defense-in-depth and the profound responsibility of data protection, demonstrating that behind every database and access control policy are real individuals whose safety depends on our diligence. Concurrently, analyzing the 2019 Capital One breach illustrated that technical competence without continuous moral vigilance and exactness creates immense vulnerability. As taught in Alma 37:37, counseling with the Lord in all our doings directs us for good, providing the spiritual discernment necessary to manage digital assets with honesty, accuracy, and unwavering care.

If I were to report on this journey to my Savior, I would express deep gratitude for the line-upon-line growth I have experienced throughout my studies, as reflected in 2 Nephi 28:30. I would share that I have striven to consecrate my technical skills to His service, learning to view system architecture, data privacy, and user support as meaningful opportunities to minister to His children. In return, I feel His gentle reassurance and clear direction: to hold faithfully to my sacred covenants, lead with humility, and use my knowledge to lift others wherever I stand.

Looking ahead, my dual portfolios of Spiritual Progression and Professional Growth will serve as my enduring compass. As I transition into cloud security engineering roles, pursue advanced industry ~~credentials~~ such as the AZ-104, AWS certifications, and the CISSP, and work to establish community digital literacy clinics, I will anchor every milestone in covenant living. Ultimately, my career knowing that when we are in itie the truth found in Mosiah 2:17, we are truly in the service of our service of our fellow beings,
