

# Server 2022 Worksheet

The purpose of this worksheet is to guide you towards successfully promoting your Server 2022 to an Active Directory (AD) Domain Controller

## Instructions

1. **Start** your Server 2022 virtual machine. You can use either your VirtualBox installation or your Team Server on ProxMox.
  - a. If you are using VirtualBox, make sure Server 2022 is connected to the same NAT Network you used in the previous project (week 3-project #8).
    - i. If it isn't, go to the VM's settings and change the network adapter to use the correct NAT Network.
  - b. Optional: check your Windows 11 VM's network settings and make sure it is connected to the same NAT Network. It doesn't need to be powered on for this project.
2. **Open** a Command Prompt and **take a screenshot of ipconfig results**.

3. **Open** Server Manager and open the Local Server page. **Take a screenshot of the Local Server page**.

**Screenshot**

The screenshot displays the 'PROPERTIES' window for the server 'IT125BeshelWSVR'. The left sidebar shows navigation options: Dashboard, Local Server (selected), All Servers, AD DS, DNS, and File and Storage Services. The main content area is divided into two sections: 'PROPERTIES' and 'EVENTS'.

**PROPERTIES** (For IT125BeshelWSVR)

|                             |                                                     |                                    |                                                    |
|-----------------------------|-----------------------------------------------------|------------------------------------|----------------------------------------------------|
| Computer name               | IT125BeshelWSVR                                     | Last installed updates             | Never                                              |
| Workgroup                   | WORKGROUP                                           | Windows Update                     | Download updates only, using Windows Update        |
|                             |                                                     | Last checked for updates           | Today at 1:17 AM                                   |
| Microsoft Defender Firewall | Domain: On                                          | Microsoft Defender Antivirus       | Real-Time Protection: On                           |
| Remote management           | Enabled                                             | Feedback & Diagnostics             | Settings                                           |
| Remote Desktop              | Disabled                                            | IE Enhanced Security Configuration | On                                                 |
| NIC Teaming                 | Disabled                                            | Time zone                          | (UTC-08:00) Pacific Time (US & Canada)             |
| Ethernet                    | IPv4 address assigned by DHCP, IPv6 enabled         | Product ID                         | Not activated                                      |
| Operating system version    | Microsoft Windows Server 2022 Datacenter Evaluation | Processors                         | Intel(R) Xeon(R) CPU X5660 @ 2.80GHz; Intel(R) Xeo |
| Hardware information        | QEMU Standard PC (Q35 + ICH9, 2009)                 | Installed memory (RAM)             | 3.96 GB                                            |
|                             |                                                     | Total disk space                   | 39.37 GB                                           |

**EVENTS** (All events | 149 total)

| Server Name   | ID    | Severity | Source                                                 | Log         | Date and Time        |
|---------------|-------|----------|--------------------------------------------------------|-------------|----------------------|
| IT125BESHWSVR | 10016 | Warning  | Microsoft-Windows-DistributedCOM                       | System      | 7/25/2025 5:24:20 AM |
| IT125BESHWSVR | 4206  | Warning  | Tcpip                                                  | System      | 7/25/2025 5:20:11 AM |
| IT125BESHWSVR | 86    | Error    | Microsoft-Windows-CertificateServicesClient-CertEnroll | Application | 7/25/2025 5:19:54 AM |
| IT125BESHWSVR | 4206  | Warning  | Tcpip                                                  | System      | 7/25/2025 5:19:47 AM |
| IT125BESHWSVR | 12    | Warning  | Microsoft-Windows-Time-Service                         | System      | 7/25/2025 5:19:20 AM |

**Properties for IT125BeshelWSVR**

4. **Promote** your server to a Domain Controller by creating a new Active Directory (AD) Domain.
  - a. You can name your domain anything you choose.
  - b. Keep the domain name 15 characters or fewer, and use a .local or .internal suffix (e.g., Team1.local).
  - c. If you are using ProxMox, make sure all group members are monitoring the promotion.
  - d. If you have done this before and feel confident, proceed. Otherwise, reference an online tutorial for creating an Active Directory (AD) Domain. Here are two suggestions:
    - i. **Read:** [Promote a Server to a Domain Controller](https://www.serveracademy.com/blog/promote-a-server-to-a-domain-controller/) (URL: (https://www.serveracademy.com/blog/promote-a-server-to-a-domain-controller/))
    - ii. **Watch:** [How to promote Windows Server 2022 to be a Domain Controller.](#)

- e. If you have any problems, please communicate with the instructor or fellow students!
5. **Take a screenshot of the Local Server page** from Server Manager *after* creating your domain controller.

**Screenshot**

The screenshot displays the 'Local Server' page in the Server Manager console. The left-hand navigation pane shows the 'Local Server' icon selected. The main area is titled 'PROPERTIES For IT125BesheWSVR'. It contains several sections: 'Computer name' (IT125BesheWSVR), 'Domain' (ensign.corp), 'Last installed updates' (Never), 'Windows Update' (Download updates only, using Windows Update), and 'Last checked for updates' (Today at 1:17 AM). Below this, there are sections for 'Microsoft Defender Firewall' (Domain: On, Enabled), 'Remote management' (Disabled), 'Remote Desktop' (Disabled), 'NIC Teaming' (Disabled), 'Ethernet' (IPv4 address assigned by DHCP, IPv6 enabled), 'Microsoft Defender Antivirus' (Real-Time Protection: On, Settings), 'Feedback & Diagnostics' (On), 'IE Enhanced Security Configuration' (On), 'Time zone' ((UTC-08:00) Pacific Time (US & Canada)), and 'Product ID' (Not activated). The bottom section shows 'Operating system version' (Microsoft Windows Server 2022 Datacenter Evaluation), 'Hardware information' (QEMU Standard PC (Q35 + ICH9, 2009)), 'Processors' (Intel(R) Xeon(R) CPU X5660 @ 2.80GHz, Intel(R) Xeo), 'Installed memory (RAM)' (3.96 GB), and 'Total disk space' (39.37 GB). Below the properties is an 'EVENTS' section showing a list of events. The table has columns for Server Name, ID, Severity, Source, Log, and Date and Time. The events listed are: IT125BESHELWSVR 10016 Warning Microsoft-Windows-DistributedCOM System 7/25/2025 5:24:20 AM, IT125BESHELWSVR 4206 Warning Tcpip System 7/25/2025 5:20:11 AM, IT125BESHELWSVR 86 Error Microsoft-Windows-CertificateServicesClient-CertEnroll Application 7/25/2025 5:19:54 AM, IT125BESHELWSVR 4206 Warning Tcpip System 7/25/2025 5:19:47 AM, and IT125BESHELWSVR 12... Warning Microsoft-Windows-Time-Service System 7/25/2025 5:19:20 AM.
